

Migration of Capture2Proposal to the Microsoft Azure Government Cloud Starting Friday, November 19.

Capture2Proposal has made significant investments to ensure compliance with DFARS 252.204.7012, FedRAMP Moderate, and CMMC Level 2 (NIST SP 800-171) to align with our customer's security requirements, particularly as they relate to securing CUI data. A key element of this initiative is upgrading our platform by migrating the Capture2Proposal application to the Microsoft Azure Government cloud environment, which provides world-class security, protection, and compliance.

The first customer-facing impact from our improvements will be the addition of multi-factor authentication for logins starting on Tuesday, November 16th. The Azure Government Cloud migration will take place starting at 9 pm ET on Friday, November 19th.

We are undertaking the migration over the week of the Thanksgiving holiday to minimize the impact on you. Once the migration starts the application will be available in read-only mode, but not for updates. We anticipate that the platform will be fully available for updates again at 7 am ET on Monday, November 29th. When the migration is complete the Capture2Proposal application will be available at <https://app.capture2proposal.us>. We will notify all customers via email when the migration is complete.

This is a very large migration project and we have been preparing for many months. While we have tested extensively, we want to ensure any issues you encounter are promptly addressed, so please notify us at support@capture2.com if you experience anything impacting your use of Capture2Proposal after the migration.

Happy Hunting!
